

Retain your competitive edge by rebuilding your existing or redundant coil winding machines.

Great money savings can be made compared to buying new.

Our new PCWM control systems can be fitted to the majority of existing linear coil winding machines, including Bobifi, B&, Marsilli, Meteor, Stollberg, etc. The work can be carried out at WT or the controls can be supplied in kit form and installed at your factory.

The high quality electrical components used in the machine control system were chosen to provide high reliability. As with all our new control systems, the components used are standard parts and spares are readily available from local suppliers worldwide. All systems are supplied with a 12 months electrical parts warranty.

## Features:

### Before

Bobifil ER1200 machine rebuilt with our PCWM control system

### Work Carried Out

- Strip out existing counter & electronics
- Strip down machine, clean & re-paint
- Change bearings and belts
- Fit new minn drive motor
