CNC 110 controller

Main features

The 110 control unit has the facility to hold 3 sets of 10 programs, each program holds a total number of turns and a number of slowdown turns.

Slow & fast speed can be set via 2 potentiometers at the back of the controller.

Programming parameters (for each stop)

- Number of turns
- Number of slow start turns
- Number of slow end turns

Applications

The 110 controller is suitable for simple winding applications which do not require an automated / programmable wire guide system. This control can be fitted to old machines with mechanical traverse drive systems.
